Skills

Tools & Technologies
Programming Languages
- Java
- JavaScript
- TypeScript

Frameworks & Library
- Spring Boot
- Nest JS
- React Native

Databases
- MySQL
- MongoDB

Other Tools
- Git
- Github
- GCP
- more

Soft-Skills
- Analytical thinking
- Collaboration & Teamwork
- Problem-Solving
- Adaptability

Education
Eduardo Mondlane University
Degree in Computer
Science (Currently Enrolled)

Summary
Software Developer with 3 years of experience designing, building, optimizing systems. with a strong focus on backend development, while expanding expertise in mobile app development. Seeking to leverage technical skills to contribute to a dynamic, forward-thinking organization. As a software developer, with focus on driving innovation and delivering high quality results.

Experience

Intern Software Developer
Leeva Digital Agency - Sep 2023 - Jan 2024
- I worked on developing a PHP backend service to replace Firebase for a custom printing company
- Collaborated closely with the client to define system requirements, establish goals, and ensure their vision was met
- Designed and implemented backend RESTful APIs using PHP, enhancing system efficiency and providing the client with greater control and scalability
- **Tools:** PHP, Angular, MySQL, JWT, others

Additional Experience - Personal Projects
Restaurant Listing and Reserves
- I am developing a marketplace for restaurants in TypeScript, Nest JS (Node JS) and React Native, enabling individuals of legal age to list their restaurants or make reservations for specific durations
- Involved in all lifecycle since design to deployment process both frontend and backend
- My goal is for the platform to increase visibility for both small and large businesses, helping to boost their revenue and connect people to new places and experiences.
- **Tools:** TypeScript, NestJS, React Native, JWT, MongoDB, and other technologies to create both the backend and frontend components
- **Project Completion:** December 2024 - January 2025

Web Traffic Management Service
- Designed and developing process for a scalable backend service using Java spring boot, providing functionalities for traffic management, rate limiting and health status monitoring.
- Ensured the system is scalable and easy to integrate with other systems.
- **Tools:** Java, Spring Boot, MySQL, others
- **Project Completion:** No scheduled completion
